### B. Read the following passage and mark the letter A, B, C, or D to indicate the correct answer to each of the questions.

NASA officials expressed a great deal of *concern* over the descent of Skylab, a satellite which was slowly making its way back to Earth and was expected to reenter our atmosphere within the two weeks. The aluminum Skylab was not expected to burn up on reentry. In fact, it was feared that some 400 to 500 pieces, some weighing up to 1,000 pounds, could survive reentry. These pieces would not all land in one area, but would be spread over hundreds of miles causing a great deal of damage to property and endangering human lives. At this point, we just don't know where or when it will come down or how much damage it might cause.
